Patent No. 6380370
GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al
APPLICANT: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC-007
CURRENT APPLICATION NUMBER: US/09/134,001C
CURRENT FILING DATE: 1998-08-13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PRIOR APPLICATION NUMBER: US 60/064,964

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. US20020055161A1

GENERAL INFORMATION:
APPLICANT: Glucksmann, Maria A.
TITLE OF INVENTION: 57658, A NOVEL HUMAN URIDINE KINASE AND TITLE OF INVENTION: USES THEREOF
FILE REFERENCE: 381522001700

CURRENT APPLICATION NUMBER: US/09/896,522

CURRENT FILING DATE: 2001-06-28
PRIOR APPLICATION NUMBER: 60/216,503
PRIOR FILING DATE: 2000-06-30

NUMBER OF SEQ ID NOS: 6
SOUTWARE: FeatSEQ for Windows Version 4.0

SEQ ID NO 1
LENGTH: 1624
TYDE: DNA
ORGANISM: Homo sapiens
FEATURE:

Sequence 2805, Application US/09764877

Patent No. US20020147140A1

GENERAL INFORMATION:
APPLICANT: Rosen et al.
TITLE OF INVENTION: Nucleic Acids, Proteins, and Anti
FILE REFERENCE: PC005
CURRENT APPLICATION NUMBER: US/09/764,877
CURRENT FILING DATE: 2001-01-17
Prior application data removed - refer to PALM or fil
NUMBER OF SEQ ID NOS: 4031
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 2805
LENGTH: 19125
TYDE: DNA
                                                                               S
                                                                                                                   밁
                                                                                                                                          Ş
                                                                                                                                                                          뫄

CC 57658 and polynucleotides encoding such proteins. 57658 DNAs and proteins CC are useful for developing diagnostic and therapeutic agents for 57658—CC mediated or related disorders such as haematopoietic neoplastic disorders (e.g. leukaemia), haematopoietic disorders (e.g. psoriasis, dermatitis, CC diabetes mellitus, rheumatoid arthritis, disorders of bone (e.g. rickets, CC disease), heart (e.g. sarcoma, myocardial infarction), blood vessels (e.g. hypertension, atherosclerosis) and neurons (e.g. Huntington's CC disease, Alzheimer's disease, Parkinson's disease). 5758 sequences or their antibodies are useful in screening assays, detection assays (e.g. CC forensic biology) and predictive medicine (e.g. diagnostic assays (e.g. CC frey are useful as reagents for diagnosing and treating 57658—mediated CC disorders. 57558 DNAs are useful in gene therapy, in chromosome mapping, CC and to aid in forensic identification of the biological sample. The present sequence is a DNA encoding human 57658 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           á
 The present invention describes primer sets for synthesising 5602 (C full-length cDNAs defined in the specification. Where a primer set (C comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end cc polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises a st least 15 nucleotides and the combination of the 5'-end sequence, 'are useful for synthesising polynucleotides, and the specification. The primer sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAH13633 to AAH13672 represent human cDNA sequences; AAB92446 to AAH13631 control of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
